

WE SEGREGATE WASTE

Throughout the campus in the corridors on each floor, over 90 recycle bin sets have been placed. We must be aware that waste segregation already in the place of its formation, i.e. at the University, allows for much more efficient work in sorting rooms, which makes much less waste end in the landfill. With that strategy implemented at JDU, the University has significantly reduced its waste management bills as well, which is a notable benefit to the University. Another step introduced at the premises are biodegradable disposable containers which can be found at given places on campus where water dispensers are located. Soon enough the containers will be available in each University building. It will noticeably decrease the number of daily plastic bottles disposal.
